

## About us

Based in the UK, we provide custom online learning platforms to international schools teaching the IB, EdExcel, CIE, British or American curricula.

We offer a bespoke, end-to-end service including design, implementation, training and support, with a focus on the particular needs of international schools. Our team has over a decade of experience in the e-learning sector, and we've worked with schools from across Europe, Asia, Africa and the Americas.

## What is a Learning Platform?

If you're not familiar with the term online learning platform you may have heard other similar terms, or their acronyms, such as Virtual Learning Environment or Learning Management System.

Essentially, what these terms describe is a web-based system which allows teaching and learning online. Some common features of an online learning platform are:

- Stores learning resources and media
- Allows the creation of learning activities
- Allows these to be structured as courses
- Stores grades and students' progress
- Provides reporting on the data collected
- Accessible from any device

The key benefits to you are savings in both time and administrative costs, improved engagement from both staff and students, better parental involvement and the delivery of more personalised learning programmes.

Titus Learning Platform makes it easy to engage parents, with **real time reporting of attendance, behavioural and assessment data.**

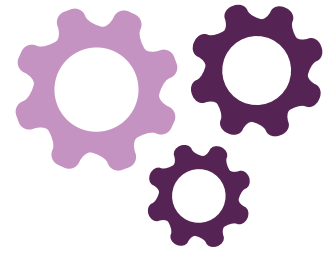

**Staff changes?** Titus Learning Platform is designed to be intuitive, and makes it easy to transfer course materials and resources between teaching staff.

# Titus Learning Platform

We've designed our learning platform to give you all the functionality you need, and make it a pleasure to use, without the unnecessary complexity we've seen in some of the other platforms on the market.

To get the most out of the Titus Learning Platform, it needs to work seamlessly with your existing MIS. This gives you access to powerful reporting tools and student data, as well as making the learning platform incredibly simple to manage, and saving you valuable time. You'll also be able to share key data with students and parents, bridging the gap between home and school learning.

Titus Learning Platform supports over **90 different languages.**

## Case study: International School Brunei

Previously using a free LMS solution, ISB were looking for a more sophisticated platform to provide true 21st century learning at their new, high tech campus.

### Key points:

- An on-site server for the best performance
- Integration with SIMS for two-way reporting
- An open-source platform for future proofing

**“Titus Learning’s efficient and open communication has made working with them easy and we look forward to how the VLE will evolve over the coming months” - Carol Hancox, ISB**

**Using Moodle?** We can offer SIMS, CMIS, Veracross and iSAMS integration as a standalone solution.

Titus Learning Platform is based on Moodle, so any of our design, training or hosting services can work with your existing LMS.

# Why international schools?

We've designed Titus Learning Platform specifically for the needs of international schools. From challenges around staff transitions, to the importance of involving parents in their child's learning, to adapting the platform for diverse curricula and multilingual environments, our bespoke solution goes further than an "off the shelf" product.

Although we're based in the UK, we're able to provide a 24/7 managed service, and we're happy to arrange face to face meetings at your school as part of the process.

Titus Learning is a member of **COBIS, BESA, EARCOS, ECIS** and **FOBISIA**.

## Moodle services

We've built our learning platform on Moodle - the world's most popular open source VLE. This means if you're already using Moodle in school, you can still take advantage of many of the services we offer without switching to Titus Learning Platform. Whether you're looking for theme design, staff training, hosting services or simply consultation, we can help you get the most out of your current system.

Our service is **fully managed** from consultation and design right through to training and ongoing support.
